

CFF / SMR-F Downloader

Search and download CFF / SMR-F files · BinRazor

What it does

Searches the firmware database by software number and downloads the matching CFF or SMR-F file. Enter part of a software number, pick a result and download it — optionally unzipping the archive on the way.

First launch

The first time you open the tool it checks and, if needed, downloads its database. Wait for that check/update to finish before searching. The database date is shown at the top; later launches only check for updates.

The controls

SW Number:	Enter part of the software number to search — a fragment is enough.
Filter	Limit results by type: All, CFF or SMR-F. All shows both.
Results	Matches appear as “SW number Type”. The count is shown as Found: N.
Unzip	When ticked, the downloaded archive is extracted after download.
Download Selected	Downloads the item selected in the results list.

What to press

1. Wait for the database check / update to finish.
2. Enter part of the software number in [SW Number](#) (set the [Filter](#) if you want only CFF or only SMR-F).
3. Select an item from the [Results](#) list.
4. Tick [Unzip](#) if you want the archive extracted, then click [Download Selected](#) and choose where to save.

Good to know. You don't need the full software number — a partial fragment matches. [Found: N](#) shows how many entries matched, so if nothing appears, shorten the fragment or change the filter.

Download only. The tool searches the database and saves files where you choose — it never writes to a control unit.

For diagnostics and legitimate servicing only. Full responsibility for use rests with the user.
